

◆ SECTION 1: Course Introduction

✚ What is a Project?

Definition: Temporary effort to create a unique product.

Example:

Building a “Fitness Tracking Mobile App” in 6 months with ₹15 lakh budget.

It:

- Has start & end date
 - Has budget
 - Produces unique product
-

◆ SECTION 2: Business Environment

1 Foundation

✓ Project vs Program vs Portfolio

- **Project:** Develop Fitness App
 - **Program:** Develop Fitness App + Diet App + Wearable Integration
 - **Portfolio:** All company digital health initiatives
-

✓ Project Life Cycle

Predictive (Waterfall)

Plan everything first.

Example:

- Requirements finalized
- Fixed features
- Fixed timeline

Agile

Build in sprints.

Example:

- Sprint 1 → Login feature
- Sprint 2 → Calorie calculator
- Sprint 3 → Dashboard

Hybrid

Planning fixed, development agile.

✓ PMO Example

Company PMO:

- Approves project budget
 - Monitors performance
 - Provides templates
-

✓ Organizational Structure Example

Functional:

- Developers report to IT Manager

Matrix:

- Developers report to IT Manager AND Project Manager

Projectized:

- Full team reports only to Project Manager
-

✓ Agile Manifesto Example

Instead of:

200-page requirement document

We do:

Working login feature demo in 2 weeks

2 Strategic Alignment

Project must support business goal.

Company Goal:

“Increase digital revenue by 20%”

Your Fitness App:

- Subscription model
- Ads revenue

→ Strategic alignment achieved.

Project Benefits & Value

Financial Benefit Example

- Development cost: ₹15,00,000
- Expected revenue: ₹25,00,000

$ROI = (Profit / Investment) \times 100$

$ROI = (10,00,000 / 15,00,000) \times 100 = 66\%$

Non-Financial Value

- Brand visibility
 - Customer loyalty
 - Market expansion
-

Organizational Culture & Change

If team resists Agile:

You apply ADKAR:

- Awareness
- Desire
- Knowledge
- Ability
- Reinforcement

Example:
Train team on Scrum.

5 Project Governance

Example:

- Steering committee reviews project monthly
 - Stage gate approval before release
-

6 Project Compliance

Example:

- App must follow GDPR
 - Data privacy laws
 - Google Play policies
-

◆ SECTION 3: Start the Project

1 Identify & Engage Stakeholders

Stakeholders Example

- Sponsor
 - Users
 - Developers
 - Marketing team
 - Investors
-

Power-Interest Grid

High Power + High Interest → Manage closely (Sponsor)

Low Power + High Interest → Keep informed (Users)

Stakeholder Register Example

Name	Role	Power	Interest
------	------	-------	----------

Raj	Sponsor	High	High
-----	---------	------	------

Users	Customer	Low	High
-------	----------	-----	------

2 Form the Team

Tuckman Model Example

Forming → Team members meet

Storming → Arguments on tech stack

Norming → Agree on Firebase

Performing → Develop efficiently

RACI Example

Task	PM	Dev	QA
------	----	-----	----

Login Feature A	R		C
-----------------	---	--	---

R = Responsible

A = Accountable

C = Consulted

3 Build Shared Understanding

Project Charter Example

- Objective: Build fitness app in 6 months
 - Budget: ₹15L
 - Scope: Mobile app only
 - Success: 10,000 downloads
-

4 Determine Project Approach

Project complexity: Medium

Requirements change often

→ Choose Agile

Scrum roles:

- Product Owner
 - Scrum Master
 - Dev Team
-

◆ SECTION 4: Plan the Project

1 Project Management Plan

Includes:

- Scope plan
 - Schedule plan
 - Cost plan
 - Risk plan
-

2 Scope Management

Requirements Example

- User login
 - Calorie calculator
 - Workout tracker
-

WBS Example

1. App Development
 - 1.1 UI Design
 - 1.2 Backend Setup
 - 1.3 Firebase Integration
-

3 Schedule Management

Create Gantt Chart:

- Design → 2 weeks
- Development → 12 weeks
- Testing → 4 weeks

Critical Path:

Longest sequence of dependent tasks.

4 Resource Management

Developers: 3

Designer: 1

QA: 1

If developer overloaded → resource leveling.

5 Budget Management

Planned Value (PV) = ₹5L

Earned Value (EV) = ₹4L

Actual Cost (AC) = ₹6L

$CPI = EV / AC = 4 / 6 = 0.67$

$< 1 \rightarrow$ Over budget

6 Risk Management

Risk:

Firebase server downtime.

Response:

Mitigate → Backup cloud system.

7 Quality Management

Use:

- Test cases
- Bug tracking
- User acceptance testing

Pareto Example:
80% bugs from 20% modules.

8 Integration

If client asks new feature:

- Submit change request
 - Analyze impact
 - Approve before implementation
-

◆ SECTION 5: Lead the Project

Example Conflict:

Developer wants React Native

Another wants Flutter

PM:

- Listen
- Evaluate
- Decide based on business need

Leadership style:

Servant leadership (Agile)

◆ SECTION 6: Support Team Performance

Example:

Sprint Review → Show feature demo

Retrospective → Improve communication

Remove impediment:

API delay → Escalate to vendor

◆ SECTION 7: Close the Project

Steps:

- Final acceptance from sponsor

- Archive documents
- Release team
- Conduct lessons learned

Example Lesson:

Next time define requirements clearly before Sprint 1.

◆ SECTION 8: PMP Application Assistance

When writing PMP experience:

Describe using:

- Objective
- Role
- Approach
- Deliverables
- Outcomes

Example:

“I led a 6-month Agile project to develop a mobile fitness application. Managed 5-member cross-functional team, controlled ₹15L budget, and delivered product with 10,000+ downloads.”

FINAL UNDERSTANDING

This course teaches you:

1. Align project to strategy
2. Start correctly
3. Plan professionally
4. Lead effectively
5. Control risks & costs
6. Deliver value
7. Close properly
