

# Agile Scrum Master (ASM®)

## 1 Course Introduction – What Is This About?

This course teaches you:

- How modern companies manage projects
- How to deliver products faster
- How to handle changing requirements
- How to work as a self-organized team

The main focus is **Agile and Scrum project management**.

---

## 2 Agile Way of Thinking

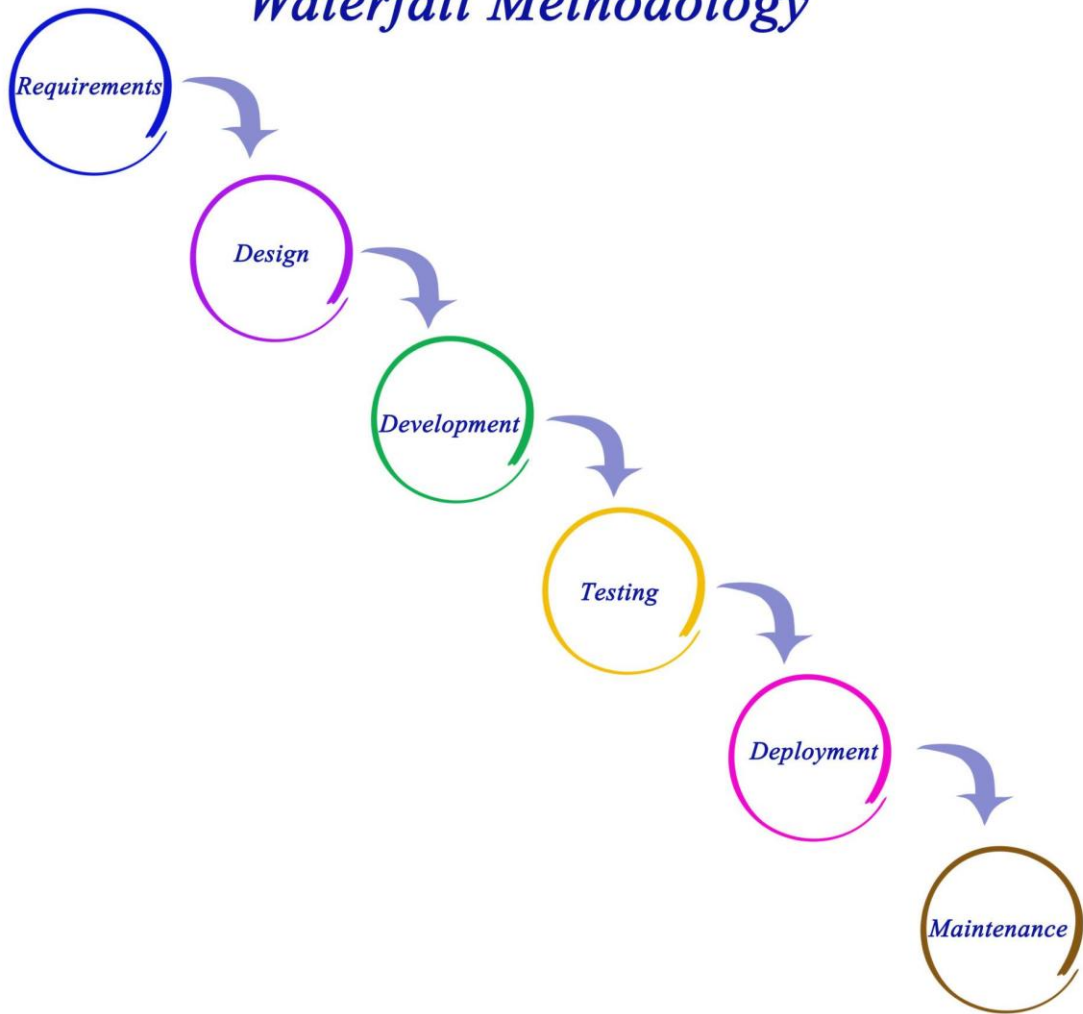

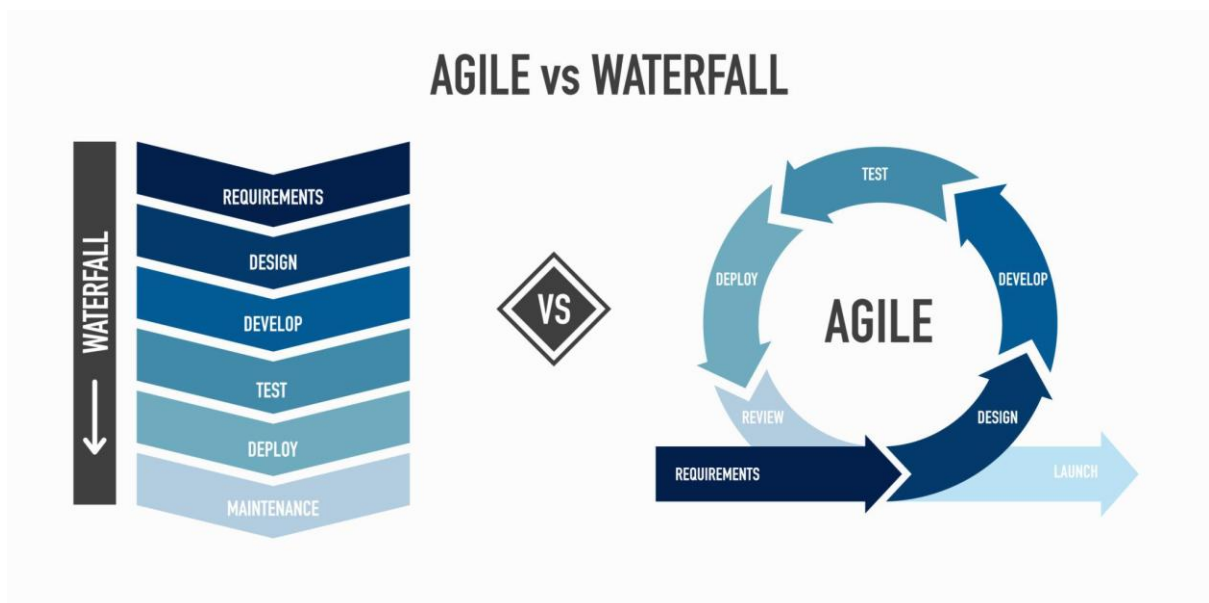

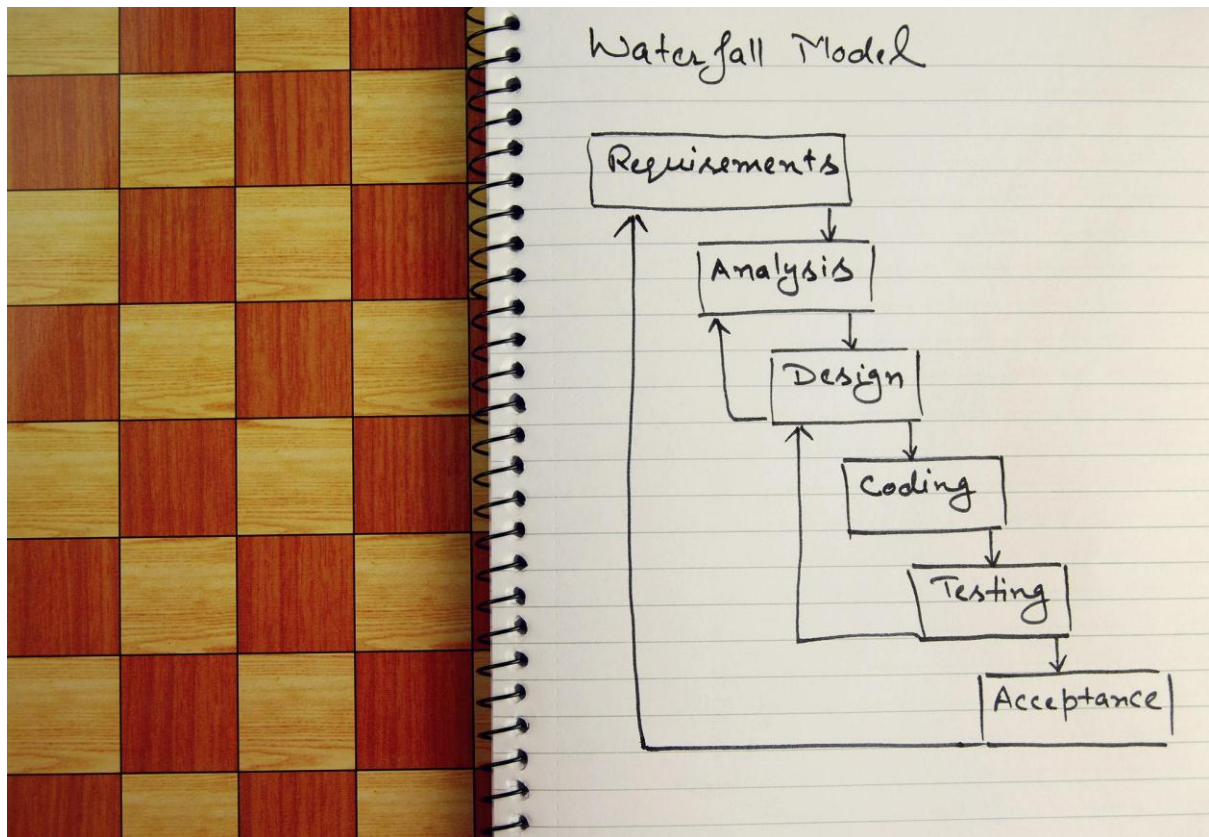

### Why Agile Was Created?

Before Agile, companies used **Waterfall Model**.

**Waterfall Model**

## *Waterfall Methodology*

4

Waterfall steps:

1. Requirements
2. Design
3. Development

4. Testing
5. Deployment

Problem:

- Everything is fixed at the beginning.
  - If customer changes requirement → big problem.
  - Feedback comes very late.
- 

### ✓ Agile Solution

Agile says:

- Work in **small cycles**
  - Deliver small working product quickly
  - Take feedback
  - Improve continuously
- 

### ◆ Agile Manifesto (Core Beliefs)

Agile values:

- Individuals & interactions over processes
- Working software over documentation
- Customer collaboration over contracts
- Responding to change over following a plan

👉 Meaning: Be flexible and customer-focused.

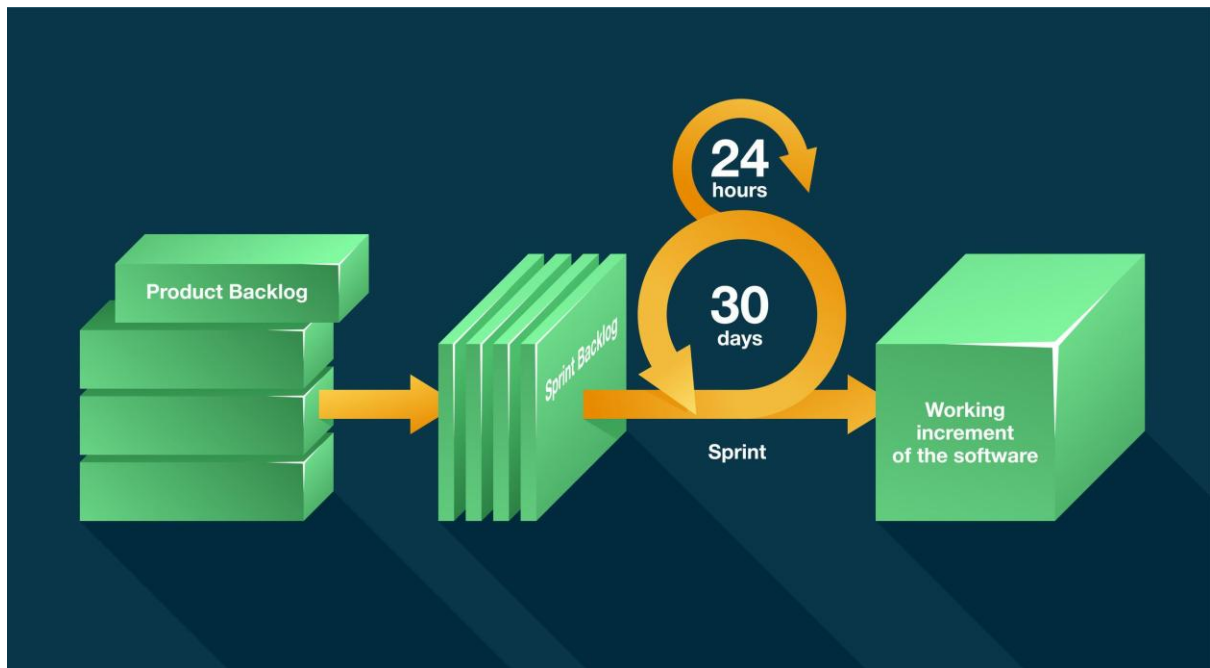

---

### 3 Scrum Framework (Most Popular Agile Method)

Scrum is a **structured way to implement Agile**.

---

### ◆ Scrum Roles

Team decides what to build in this sprint.

### **Daily Standup**

15-minute daily meeting:

- What did I do yesterday?
- What will I do today?
- Any blockers?

### **Sprint Review**

Show completed work to stakeholders.

### **Sprint Retrospective**

Discuss:

- What went well?
- What can improve?

---

#### ◆ **Scrum Artifacts**

- Product Backlog → List of all features
- Sprint Backlog → Work selected for sprint
- Increment → Working product

---

### **Agile Estimation & Planning**

#### ◆ **User Story**

Format:

As a [user], I want [feature], so that [benefit].

Example:

As a user, I want login functionality so that I can access my account securely.

---

#### ◆ **Estimation Methods**

- Story Points (complexity-based estimation)

- Planning Poker
- Ideal Time

---

### ◆ Velocity

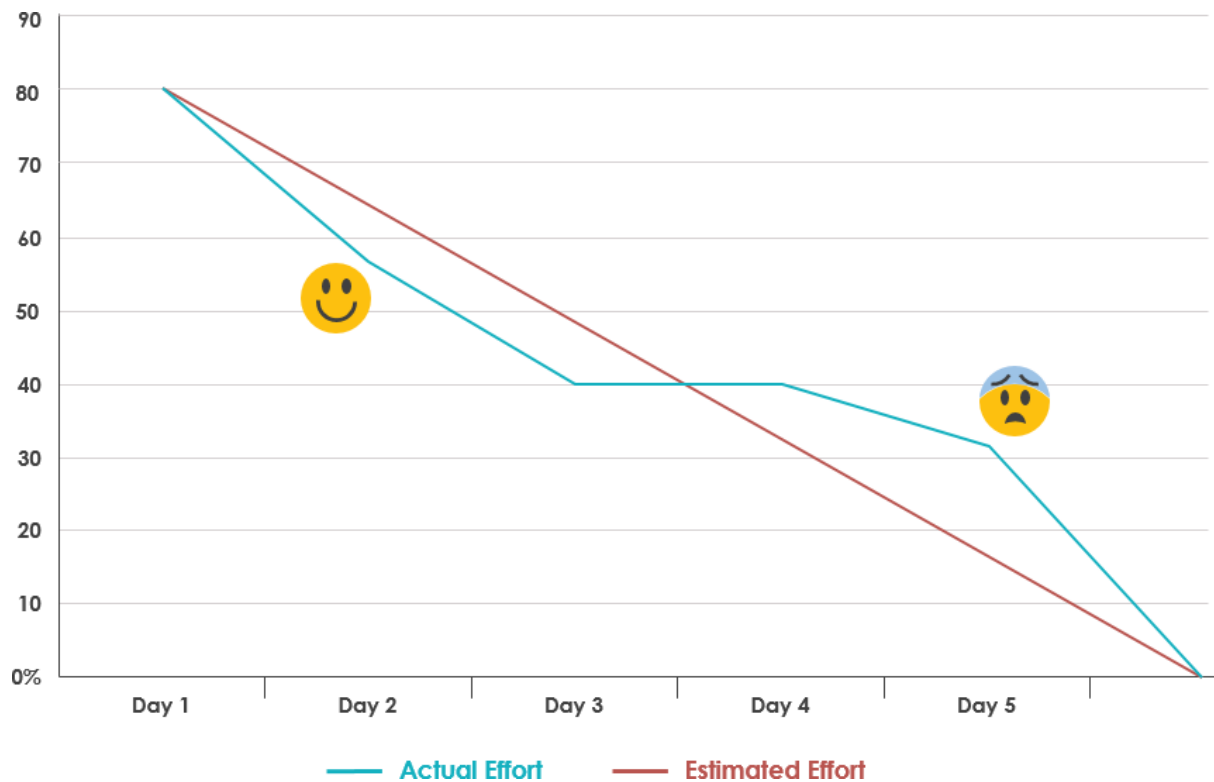

Velocity = Total story points completed in one sprint.

Helps in:

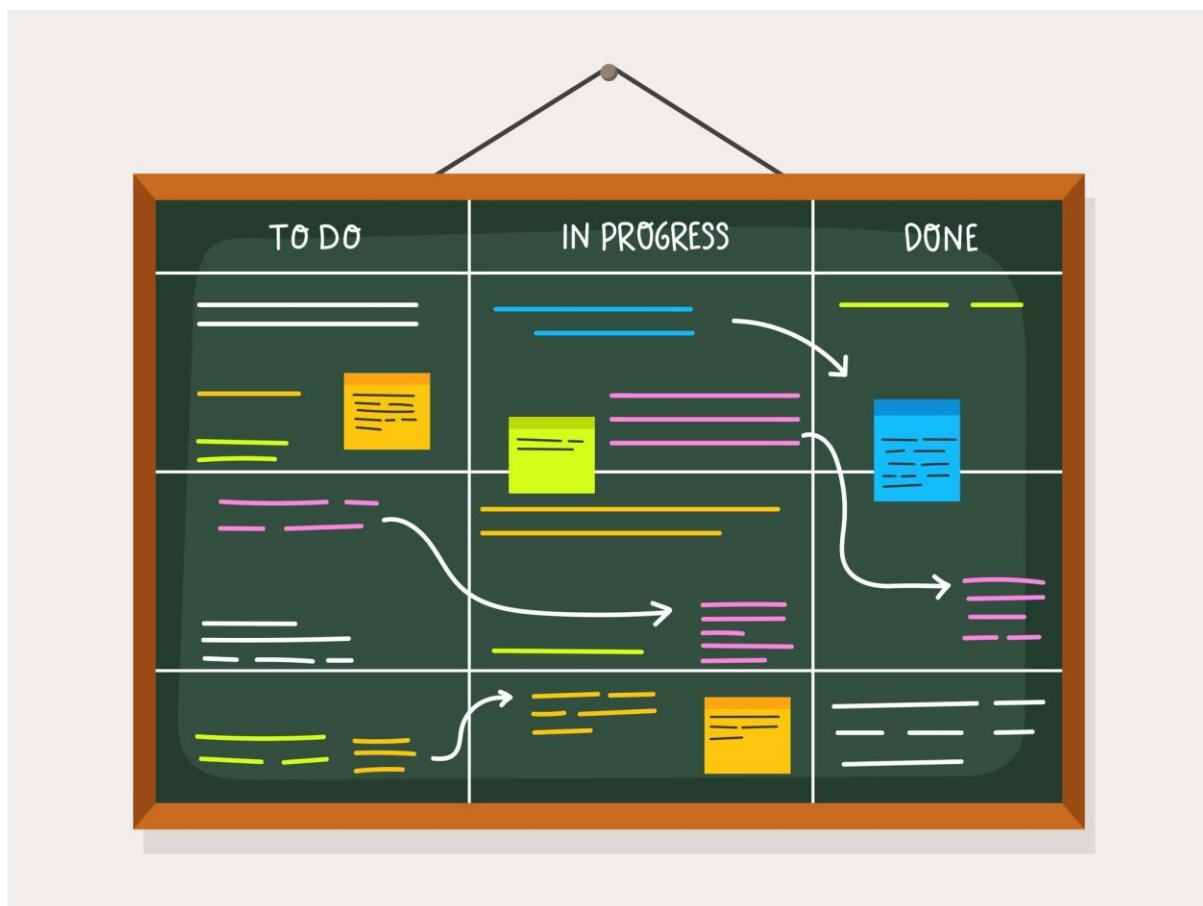

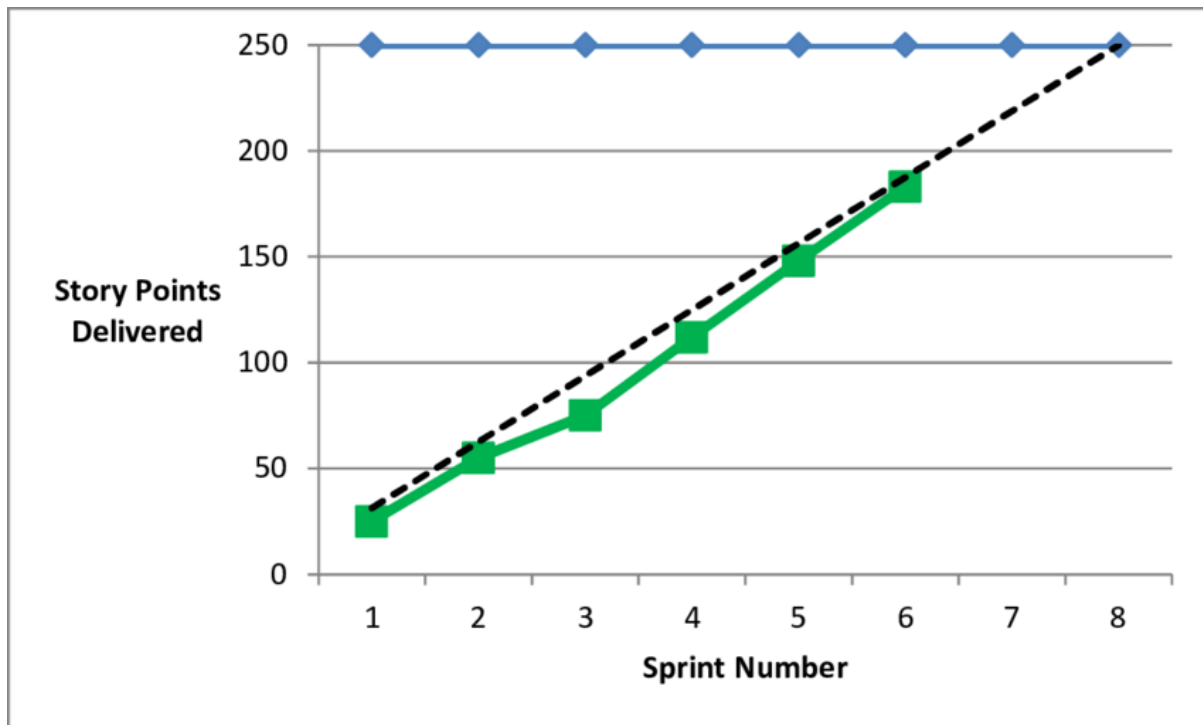

- Predicting future delivery
- Release planning

---

### ◆ Monitoring Tools

4

- Burndown chart → shows remaining work
- Burnup chart → shows completed work

- Scrum board → task tracking
- 

## 5 Other Agile Frameworks

Besides Scrum:

### ◆ Extreme Programming (XP)

- Pair programming
- Continuous testing
- Frequent releases

### ◆ Kanban

- No fixed sprints
- Continuous flow
- Work-in-progress limits

### ◆ Lean

- Remove waste
  - Deliver value faster
- 

## 6 Complex & Large Projects

When project grows big:

- Multiple Scrum teams
  - Scrum of Scrums meetings
  - Scaling frameworks (Nexus, Disciplined Agile)
  - Distributed teams
  - Cultural challenges
- 

## 7 Adopting Agile in Organization

Agile is not just process.

It is **mindset change**.

Requires:

- Management support
  - Training
  - Cultural change
  - Handling resistance
  - Continuous improvement
- 

### **Complete Course Summary (Easy Version)**

This course teaches:

- Why Waterfall fails in modern world
- How Agile solves flexibility problems
- How Scrum works in real life
- Roles & responsibilities in Scrum
- Writing user stories
- Estimating work
- Tracking progress
- Handling large projects
- Successfully adopting Agile
